

STRIIM CLOUD

Real-Time Data Integration and Streaming as a Service

Striim's fully managed product offers real-time data integration and streaming as a service. Stream data across clouds and applications with unprecedented speed and simplicity to deliver the right data at the right time. Available everywhere. All the time.

With over 150 prebuilt connectors for streaming data, you can power your organization's digital and cloud transformation with real-time data integration and streaming.

Business Benefits

Stream data with world's fastest Oracle CDC

Keep data flowing from legacy solutions and proactively run your business with Smart Data Pipelines that reach new levels of speed and performance. Striim replicates changes up to the moment using change data capture (CDC) and real-time ETL, using smart, in-memory processing to run analysis, trigger alerts, and kickstart workflows on data in transit.

Perfect the customer experience

Simplify and improve your customer engagement using real-time insights that consistently drive great experiences. Striim transforms and analyzes data in the pipeline, instantly updating every app and system to ensure customers never get stale information or feel the frustrating effects of latency. Every event and transaction is captured and used to optimize your business, even across complex enterprise architectures.

Send productivity soaring

Striim builds no-code pipelines that instantly disperse data across business systems and operational teams. Striim's prebuilt connectors are optimized for change. Making it easier to connect legacy and cloud-first systems, while no-code workflows allow anyone to build custom data pipelines with advanced routing and rules. Striim gives you a single platform to put real-time data to use for everything from customer support to product development.

Build without limitations

Use Striim Cloud's infinite scale and comprehensive platform to make enterprise cloud transformation possible without compromise. Build a modern data stack by quickly connecting cloud-based tools to legacy systems, then create applications right on your data pipeline. Use your Striim dashboard to visualize streaming analytics and see all your pipelines in one place. As you grow, scale horizontally the moment you need using Striim Cloud's distributed, clustered architecture.

Meet enterprise compliance standards

Enjoy the scale and flexibility of real-time ETL and streaming without adding risk to your data architecture. Striim helps you adopt a cloud-first strategy while meeting your compliance goals with built-in security controls, ongoing support, and a platform designed by experts in enterprise data workloads. Demonstrate to stakeholders that your digital transformation mandates are being met with confidence.

Access data where you need it most

Move from legacy data architecture without pausing or slowing other business operations. Striim lets you pipe data to modern solutions like Microsoft Azure, Snowflake, Google Cloud, and AWS, transform and verify its accuracy across multiple targets, and minimize costly overlap.

AT A GLANCE

Fully Managed & Automated.

Zero infrastructure management means more time to focus on your business.

Cloud-Native Security.

Purpose-built for mission-critical applications. Dedicated compute. In-flight and at-rest encryption with customer-managed keys.

Scalable & Dedicated Cloud

Architecture. Your data will only touch secure, fully dedicated cloud infrastructure that can scale up or down with the click of a button.

Low Total Cost of Ownership.

Quick to deploy and ramp-up. Unify and simplify your data integration and analytics efforts.

Location Agnostic.

Seamlessly connect over 100 sources and targets across private, hybrid, and multi-cloud environments.

Real-Time.

Move data to databases and data warehouses in milliseconds, not minutes.

>150 Prebuilt Connectors.

Seamlessly connect sources and targets across private, hybrid, and multi-cloud environments.

Key Features

- Smart Data Pipelines.** Build Smart Data Pipelines in real-time that connect any enterprise system in a modern cloud architecture. Leverage best-in-market Streaming SQL to deliver real-time data ready for analysis. Merge live streams with external data for lambda views and analysis and perform continuous queries and loads.
- Real-Time Analytics & Data Insights.** Analyze and visualize continuously ingested data with dashboards, monitoring, alerts, visualizations, and reporting. Ideal for fraud detection and risk management.

- Schema Evolution and Data Validation.** Ensure data consistency and readiness with efficient validation that compares sources and targets on an ongoing basis. Striim's intelligent schema evolution lets you define how to propagate changes to downstream subscribers.
- Fastest Oracle CDC on Earth.** High-performance log-based change data capture streams incremental changes to targets with minimal impact on sources, networks, and applications.
- Continuous Replication.** Replicate data continuously in real-time to enable application availability and disaster recovery.

“Striim gives us a single source of truth across domains and speeds our time to market delivering a cohesive experience across different systems.”
